

# How to install your Loft Wardrobe by LoftZone.

## Inside Your Pack

- One fabric LoftZone Loft Wardrobe
- One Hanging Pole, with 4 washers
- Two Hanging Pole Support Brackets, with 4 screws

## You Will Need

- Screwdriver
- Tape Measure

## Please Note

This wardrobe should only be used for domestic storage, in a well-ventilated attic that is free from condensation. Ensure safe and well-lit access in your attic – lay flooring and do not step on the plasterboard ceiling as it may not hold your weight.

1. Fix the two Hanging Pole Support Brackets on the insides of each truss, in the location where you intend to place your wardrobe. We recommend that the edge of each Hanging Pole Support Bracket is parallel with the edge of the truss and that the slots for the Hanging Pole(s) face away from you. Use your tape measure to ensure that both Hanging Pole Support Brackets are at the same height, and that each one's lowest screw hole is at least 170cm (67") above the floor of your attic.

2. Temporarily remove any washers from the Hanging Pole. Then, holding the Hanging Pole outside the wardrobe, pass it through the eyelet in one side into the wardrobe (image 2a) . Then place two washers on the part of the Hanging Pole that

is inside the wardrobe (image 2b), before passing the end of the Hanging Pole through the other eyelet and back outside the wardrobe (image 2c).

3. Push the two washers that are on the Hanging Pole inside the wardrobe to the edges of the wardrobe, to hold the sides of the wardrobe in position.

4. Place the Hanging Pole so that it rests on the two Hanging Pole Support Brackets. Each Hanging Pole Support Bracket has two locations for Poles, this is to allow you to place another wardrobe next to it.

5. Finally, push the other two washers on to the protruding ends of the Hanging Pole, so that they touch the Hanging Pole Support Brackets, as this stops any sideways movement.
